## FAST ROPE RACK POSITIONER DATA SHEET

The positioner has been designed in conjunction with the armed forces in order to maintain the rack in position pre-descent.

The positioning device will maintain the descender in place enabling personnel to attach themselves to one leg of the lanyard as well having the time to attach any equipment, a dog or second person.

The Fast Rope Rack positioner is made from a hi-vis yellow webbing loop. It is attached to the DLT termination and is also visible with night vision equipment.

The red webbing and ball loop handle is used to release the snap shackle, subsequently releasing the Fast Rope Rack.

The Snap shackle is an 85mm fixed eye Ronstan release shackle.

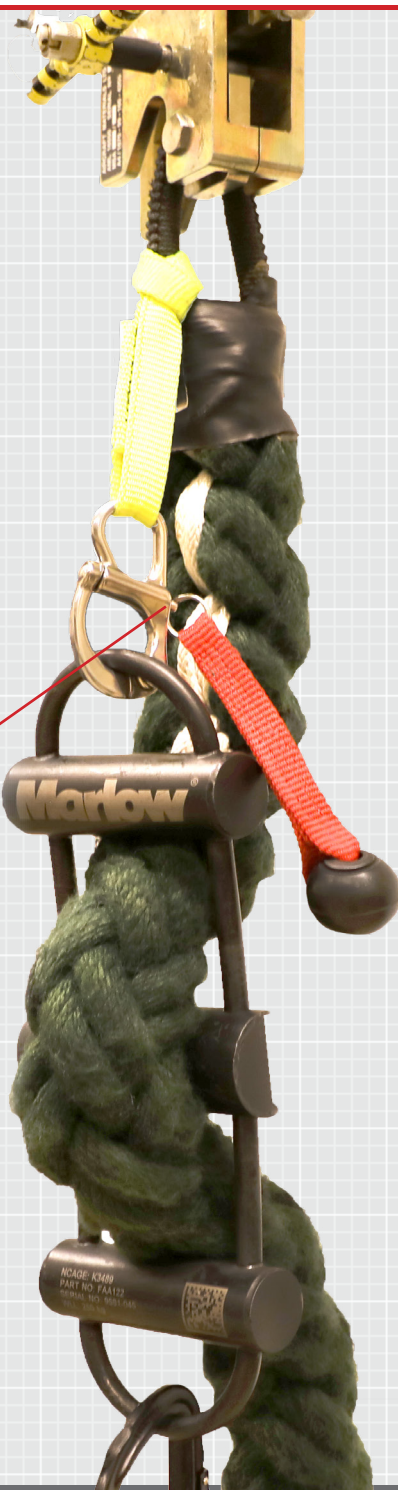

### SPECIFICATIONS

Weight = 0.4Kgs.

Commodity code = 94059990

**Can be supplied together with the Fast Rope Rack as a full assembly or as a spare unit.**

**Made in the UK**
